

- **tables:** main table from which the records are received. At least one table must be there in the FROM clause.
- **WHERE:** Though optional but if given it must meet the records to be used in combination with selection.
- **GROUP BY expressions:** Though optional, if used it collects data from several records and then groups the desired results for one or multiple columns.
- **HAVING condition:** Though optional, mainly used with GROUP By to restrict specific groups of returned rows limited to TRUE conditions.
- **ORDER BY expression:** Though optional and if provided it is used to sort the records in specific results for your query.
- **LIMIT:** Though optional, if provided are used to control many records with specific values.
- **PROCEDURE:** Though Optional, if used it defines the procedure_name to process the data specifically.
- **INTO:** Though optional, if provided it gives access to write the result with either a variable or a file.
- **INTO OUTFILE 'filename' options:** This writes the result to a specific filename on the server host with multiple options of Escape, Termination, and table values.
- **INTO DUMPFILE 'filename':** This writes the one row of the result set to a specific file called filename specifically on the server host. In this method, there are no line termination, no column termination, or escape processing.
- **INTO @variable1, @variable2, ... @variable_n:** This writes the values to one or multiple variables as specified in the query.
- **FOR UPDATE:** Though optional, if provided the records affected by a query are write-locked till the transaction has been completed.
- **LOCK IN SHARE MODE:** Though Optional, if provided then records that are affected by the query, are allowed to use other transactions though it can not be updated or deleted by specific transactions.

MySQL Select Example

This following query asks for all fields in the order details table where the quantity is greater than or equal to 8. The result is then sorted in ascending order as per preference.

```
SELECT *
FROM order_details
WHERE quantity >= 8
ORDER BY quantity ASC;
```
