

```
SELECT 3 XOR 2;
The output will take the form as:
MySQL> SELECT 3 XOR 2;
+-----+
| 3 XOR 2 |
+-----+
|      0 |
+-----+
1 row in set (0.00 sec)
```

Comparison Operators

Comparison Operators are a mathematical symbol that is used to compare two values. The result of these Comparison Operators is TRUE, FALSE, or UNKNOWN depending on the expression's value. Some operators LEAST() and GREATEST() can have different values. They work ideally for all numbers and strings. Here is a simple table explaining different Comparison Operators.

NAME	DESCRIPTION
>	Greater than operator
>=	Greater than or equal operator
<	Less than operator
<>, !=	Not equal operator
<=	Less than or equal operator
<=>	NULL-safe equal to operator
=	Equal operator
BETWEEN ... AND ...	Whether a value is within a range of values
COALESCE()	Return the first non-NULL argument
GREATEST()	Return the largest argument
IN()	Whether a value is within a set of values
INTERVAL()	Return the index of the argument that is less than the first argument
IS	Test a value against a boolean
IS NOT	Test a value against a boolean
