

NOT with IS NULL Condition Example

Here is an example of NOT with IS NULL condition with code.

```
SELECT *
FROM contacts
WHERE first_name IS NOT NULL;
```

This MySQL will return all the records from a contacts table with condition that first name doesn't contain a NULL.

NOT LIKE Condition

Here is an example of NOT with LIKE condition with code.

```
SELECT publisher_id, publisher_name
FROM publishers
WHERE publisher_name NOT LIKE 'S%';
```

This combination of NOT with LIKE will fetch all the results with publishers' names that don't start with S.

NOT With BETWEEN Condition

Here is an example of NOT with BETWEEN condition with code.

```
SELECT *
FROM orders
WHERE order_id NOT BETWEEN 200 AND 299;
```

The following combination of NOT and BETWEEN will fetch all the orders id from the order table that is not between 200 and 299 respectively.

NOT with EXISTS Condition

Here is an example of NOT with EXISTS condition with code.

```
SELECT *
FROM suppliers
WHERE NOT EXISTS (SELECT *
                  FROM orders
                  WHERE suppliers.supplier_id = orders.
supplier_id);
```

The Combination of NOT and EXIST in MySQL will result in records from the supplier's table when there no records in the orders table from a given supplier_id. **d**
