

NULL

NULL

6

Notice that from the archive there was only one record recovered. It is because at the beginning of the title of your movie our code matches every number of characters and only records which end with the code sequence. Then push the wildcard percentage to the end of the given template to suit. Underneath the changed script.

```
SELECT * FROM movies WHERE title LIKE 'code%';
```

Running the script above against the myflix db in MySQL workbench gives us the following results.

movie_id

title

director

year_released

category_id

4

Code Name Black

Edgar Jimz

2010

NULL

Just one document from the archive was recovered. The code corresponds with the standard “code,” followed by any number of characters, for all names. Let’s look at another example.

ID	NAME	AGE	ADDRESS	SALARY
1	Ramesh	32	Ahmedabad	2000.00
2	Khilan	25	Delhi	1500.00
3	Kaushik	23	Kota	2000.00
4	Chaitali	25	Mumbai	6500.00
5	Hardik	27	Bhopal	8500.00
6	Komal	22	MP	4500.00
7	Muffy	24	Indore	10000.00

The code block below is an example, where all the CUSTOMERS records where SALARY start with 200 are shown.
