

CHAPTER #05

Understanding String Functions

We understand what string functions are and delve into using various kinds of string functions

Before we move on to string functions, let us first understand what strings are. Simply put, strings maintain harmony, even in artificially intelligent beings for intelligent beings. We create strings with our intelligence to delete it from memory, transferring the burden of memorising the essentials on to the computer. String functions, therefore, are what we use in computer programming, to manipulate strings or information regarding the programming language or any such function on the computer. Moreover, string functions smoothen the functioning of database management systems.
