

SUPPLIER_ID	SUPPLIER_NAME
90000	IBM
90001	Hewlett Packard
90002	Microsoft
90003	NVIDIA

Order table has three fields with order_id, supplier_id and order_date:

ORDER_ID	SUPPLIER_ID	ORDER_DATE
500151	90000	2019/11/22
500152	90001	2019/11/23

Now we are going to run the SELECT statements with MySQL Left join as:

```
SELECT suppliers.supplier_id, suppliers.supplier_name,
orders.order_date
FROM suppliers
LEFT JOIN orders
ON suppliers.supplier_id = orders.supplier_id;
```

The result is given as:

SUPPLIER_ID	SUPPLIER_NAME	ORDER_DATE
90000	IBM	2019/11/22
90001	Hewlett Packard	2019/11/23
90002	Microsoft	<null>
90003	NVIDIA	<null>

Here, all the values of the left table are included in the result. Though with order value having information about two of the supplier date, they are included while for Microsoft and NVIDIA they are not available hence they are given <null> value.

MySQL Right Join

Also called MySQL Right outer join, this join takes all rows from the right table in the ON condition and only matching or satisfying rows from the other table.

```
SELECT columns
FROM table1
RIGHT [OUTER] JOIN table2
```
