

2	2	mobile	270-235969
3	2	land	325-888885
4	3	mobile	270-684972
5	4	mobile	245-782365
6	4	land	325-888886

Here, the following gives us employee name with their multiple phone numbers. To establish one-to-many relationships, we are utilising LEFT JOIN to get specific results.

```
SELECT e.first_name, e.last_name, t.type, t.no FROM `employee`
AS e LEFT JOIN `telephone` AS t ON e.id = t.employee_id;
```

FIRST_NAME	LAST_NAME	TYPE	NO
Robin	Jackman	mobile	245-249697
Taylor	Edward	mobile	270-235969
Taylor	Edward	land	325-888885
Vivian	Dickens	mobile	270-684972
Harry	Clifford	mobile	245-782365
Harry	Clifford	land	325-888886

We can also use multiple conditions such as LIMIT, ORDER BY, etc to have desired results.

MANY TO MANY:

When there are many records in a single table, are in relation to many records to another table, it is called many-to-many relationships. It has a specific mechanism to store relationships with an intermediate table. Here, we are considering two tables with one having employee's information given as:

ID	FIRST_NAME	LAST_NAME	JOB_TITLE	SALARY
1	Robin	Jackman	Software Engineer	5500
2	Taylor	Edward	Software Architect	7200
3	Vivian	Dickens	Database Administrator	6000
4	Harry	Clifford	Database Administrator	6800
