

FIRST_NAME	LAST_NAME	EDU_NAME
Robin	Jackman	BSc
Taylor	Edward	BSc
Vivian	Dickens	MSc
Vivian	Dickens	PhD
Harry	Clifford	NULL
Eliza	Clifford	NULL
Nancy	Newman	NULL
Melinda	Clifford	NULL
Harley	Gilbert	NULL

In case you want to omit the employees with no education, you can do so by adding a WHERE clause in the statement.

```
SELECT emp.first_name, emp.last_name, edu.name AS edu_name
FROM `employee` AS emp LEFT JOIN `employee_education` AS
ee ON emp.id = ee.employee_id LEFT JOIN `education` AS edu
ON ee.education_id = edu.id WHERE edu.name IS NOT NULL;
```

And the output will come as:

FIRST_NAME	LAST_NAME	EDU_NAME
Robin	Jackman	BSc
Taylor	Edward	BSc
Vivian	Dickens	MSc
Vivian	Dickens	PhD

There you go, you are now familiarised with tables and several types of MySQL Joins. **d**
