

focused on the Actors entirely, as these can be placed directly into the levels. Moreover, the Place mode gives the designers immediate access to the objects that can be placed. This is true for all the objects present in the project, irrespective of their individual file locations. Place Mode is useful in other ways too. It is especially used to place some specialised Actors like Lights. Had Place

mode not been there, the designers would have had to dig through files and codes to get these Actors placed. However, one should not lose sight of the fact that this mode has been specifically designed to make the process more efficient and convenient. It is a tool that drives in more work with less effort, and that is what makes it all the more important. It speeds up the process of adding props and various other knick-knacks, which would otherwise have taken quite a long time.

- **The Paint Mode:** The Paint mode, or the Mesh Paint mode, is responsible for providing an easy method for adding colours and textures to the materials of the mesh. The points listed below cover the essentials of this tool.
 - **Mesh Paint Tool Reference:** This is the page, or the reference, that provides a comprehensive guide to the settings of the various tools present under Mesh Paint.
 - **Colour selections:** Serves as a guide to the process of selecting colours for the Mesh Paint mode.
 - **Sharing Vertex Colour Data Between Instances:** This is a guide that helps one understand how to transfer the vertex colour data among meshes, using this tool.
