

Conclusion

The Level Editor is one such editor which happens to be of great use. Here we have spoken about games mainly but that is not what it is solely restricted to. In fact, there are various things that can be done using the Level editor. One more thing that is famously done using Unreal Engine is immersive VR experiences. If one carefully considers, these too require a lot of layer works, whereby all the Actors are placed in the levels so as to produce the desired effect.

Unreal Engine has done a marvellous job with its Level Editor. It is deemed as one of the best software in the world to design games and virtual reality experiences. They continue to work on such projects that are tough to create but easy to operate.
