You can add depth to visual appearance of the mesh by including materials to it

Commentary Material Expression Network

Using comments is a great way to explain what your content is doing, making it easier for you and others to understand what's going on in a complex content graph.

Add details to individual nodes

Each content node has a desk property, available through its details panel. This property is there to add a clearer description of what artists are doing to a specific node. When using this property, the text appears in the bubble when you hover over the node.

You can add text descriptions to your nodes by doing the following:

- Select your content from the graph, and then from the Details panel, find the DSC property to enter your text.
- Place your mouse cursor on the node and click on the text bubble to enter your description.

Additionally, if you want the comment to always appear, you can click on the pushpin button in the text bubble and it will appear, and not least when you are hovering over the node.

Using comments

Comments are another way to make detailed notes about certain parts of your content network. Creating them will allow you to spread the comment box around a group of multiple nodes, which is the perfect way to describe
