Atmospheric fog creates more depth in the gaming sequence

Volumes

Volumes are three-dimensional actors that are used to change the behaviour of the regions at levels. Volumes can be used for behaviours such as:

- Damage to players or other actors within the volume.
- Acting as a confrontational surface will prevent some actors from getting into volume.
- Opening the door when an actor enters the volume.
- The way a level is changed is to calculate its brightness or visibility.

Create and keep the volume

Volume can be created by selecting one from the Volume tab of the menu and dragging it into the level viewport. Once the volume is placed on a scale, you can resize it or change its position to fit. There are two important things to keep in mind when placing a volume:
