Execution Trace

animations for quick playback in various game events. With Timelines, you can make small animations that are fired in the Game scene in the background over a specific duration just like in a movie. These timelines can be simply edited from the Blueprint editor through the MyBlueprint Tab or double-clicking on any timeline in the Graph tab respectively. These timelines are specially built for managing simple tasks such as altering lights, opening and closing doors, or any small time-based changes to the Actors in part of the game.
