

- `void StartGrowing();`
 - `void StopGrowing();`
 -
 - `// Input variables`
 - `FVector CurrentVelocity;`
 - `bool bGrowing;`
 - `};`
2. Create an action called Grow and make two axes MoveX and MoveY. Set the axis to the default value as 1 and 1.
 3. Change the project settings as per wish and then add inputs.

The Project Settings page where you can input action and axis bindings

4. Include the following header files
 - `#include "MyPawn.h"`
 - `#include "Camera/CameraComponent.h"`
 - `#include "Components/InputComponent.h"`
 - `#include "Components/StaticMeshComponent.h"`
5. Automatically process the player by `AutoPossessPlayer = EAutoReceiveInput::PlayerO;`
6. Add visual component and set dummy values
 - `// Sets default values`
 - `AMyPawn::AMyPawn()`
 - `{`
 - `// Set this pawn to call Tick() every frame. You can`
 - `turn this off to improve performance if you don't need it.`
 - `PrimaryActorTick.bCanEverTick = true;`
