

```

•
• // Set this pawn to be controlled by the lowest-num-
bered player
• AutoPossessPlayer = EAutoReceiveInput::Player0;
•
• // Create a dummy root component we can attach things
to.
• RootComponent = CreateDefaultSubobject<USceneComponent>(TEXT("RootComponent"));
• // Create a camera and a visible object
• UCameraComponent* OurCamera = CreateDefaultSubobject<
UCameraComponent>(TEXT("OurCamera"));
• OurVisibleComponent = CreateDefaultSubobject<UStaticMeshComponent>(TEXT("OurVisibleComponent"));
• // Attach our camera and visible object to our root
component. Offset and rotate the camera.
• OurCamera->SetupAttachment(RootComponent);
• OurCamera->SetRelativeLocation(FVector(-250.0f, 0.0f,
250.0f));
• OurCamera->SetRelativeRotation(FRotator(-45.0f, 0.0f,
0.0f));
• OurVisibleComponent->SetupAttachment(RootComponent);
• }

```

7. The Tick function is to state of the growing pawn.

```

• // Called every frame
• void AMyPawn::Tick(float DeltaTime)
• {
•     Super::Tick(DeltaTime);
•     // Handle growing and shrinking based on our "Grow"
action
•     {
•         float CurrentScale = OurVisibleComponent-
>GetComponentScale().X;
•         if (bGrowing)
•         {
•             // Grow to double size over the course of one
second
•             CurrentScale += DeltaTime;
•         }
•         else
•         {

```
