

creates a sound wave, a set that can be directly dropped into a level or it can be utilised to create a sound cue. Once it is done, it can be added to the sound cue editor. Importing the audio files in Unreal can be done in two possible ways-

Via the content browser

- From the content browser, you have to click on the 'Import' button
- Now select .WAV file that you wish to import

Via the windows file explorer

- You have to select the sound file in windows file explorer window
- Once selected, click and drag the selected file in the content browser inside Unreal

Unreal also supports multi channeling of the sound and has a special convention while importing the audio files for multi channeling.

Importing music files

In Unreal importing music files involves-

- Navigate to the content folder and create a folder named "music 1"
- Now you have to navigate to this new folder and right-click and choose Import from the menu
- Now you have to select WAV files from the above selection and import them

You can set imported files in loop

With all the selection you have made with imported files you can right-click them and select "edit" from the menu. The resulting window will show you the number of sound waves it has and you have to make sure that all of them are looping by allowing the "looping" checkbox.

Importing the single audio files-

Currently, Unreal imports uncompressed audio files. This is done under the following segment-

- In content Browser select import
- Now you have to locate and select your .WAV file
- To start importing the files for your project click 'open'

This will enable the import progress bar to fill up and on the screen, the sound assets will appear inside the browser. This will be indicated in the success rate of the imported audio file. Also, any unsaved audio files will be marked with an asterisk sign and this will prompt you to save all of them.

- Once the dialog box for 'save content' appears on the screen you have to click on 'save selected' option to save all of the imported audio files.
