Enhanced Auto Selection tools

The Photoshop selection tool now comes equipped with Adobe Sensei. That combines artificial intelligence & machine learning to analyse and select the image sections to match specific requirements. In practice, this selection tool gives quite satisfying results. Check how it separates the car from this complex background.

Selective Selections

With select and Mask dialogue you can add selection to a specific image section. This adds a quick selection brush to isolating subjects inside the images. In the image on the next page, it is the section of a woman on the right side.

Once you complete that selection then the software automatically searches for selection within the area and also separates it. With just a single click you
