

Play Media Files in the browser

Playing videos or any other media files becomes easy with Chrome. Users here get plenty of options to run the source such as mp3, mp4, Mkv, WebM etc. All you need to do is to drag the file into the search bar and that's it. This is one of the common Chrome features many of us are not aware of.

Easily sync your Google account

Chrome is now accessible on multiple devices. Be it iOS or Android, it is easy for users to download Chrome on their device and start using it. Now, there is 'sync your account feature' in Chrome that makes your user experience even more effortless. This trait allows you to sync your Google account on multiple devices which helps you access browsing history, bookmarks, etc, all at one place.

Navigation between tabs

Easy navigation between tabs is one of the coolest features of the Chrome web browser. One can play around with multiple tabs opened at one time by pressing Ctrl + Tab in their system. Also, you can simply press Ctrl-1, Ctrl-2 and so on to swiftly navigate between opened tabs. This smooth navigation between tabs helps users experience fluid browsing.

Translate a webpage in your language

Another exciting feature of Chrome is that it allows you to understand the content of the webpage in your own language. You may come across websites which are not in your native language, thus making it difficult to understand. But this translation highlight of Chrome lets you translate the whole webpage in a single click. You don't need to search for it anywhere, the 'translation widget hint' floats around when a page is in a different language than your usual.

Block ads for the uninterrupted browsing experience

No one likes to get interrupted while browsing. It is annoying when an unwanted ad pops up and you just can't help yourself out. Well, this is not the case if you are a Chrome user. The Adblock feature of the browser removes unneeded and malicious ads while surfing and thus provides you with a great experience.
