

text colour and outline thickness. You can also give specific background colour to the title, control their opacity and synchronisation too.

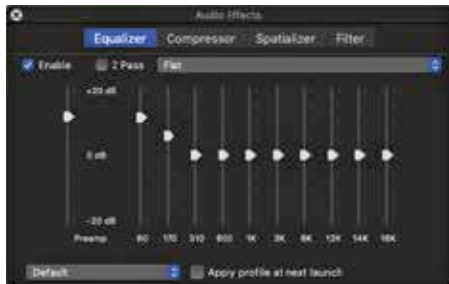

Video Effects with controls on Image allow adjusting of hue, contrast, saturation, gamma, brightness, sharpen, and film grain. You can also crop videos to remove unnecessary margins from the top, left, right and bottom of the video to view 100 per cent of the content on screen. Video Colors control are there with Threshold, Gradient, Sepia, Posterize, Motion Blur, and Extraction.

VLC Audio controls are also there as Equalizer, Compressor, Spatializer and filters. Several important functions are there in the filters that can be used effectively with Volume normalization, Karaoke, Stereo enhancer, Scaletempo, and Headphone virtualization.

Customise Views

On the main default VLC view you can customise buttons for Previous and Next buttons, Shuffle & Repeat Buttons, Audio effects Button and Sidebar.

VLC Media Skin Editor

VLC supports complete personalisation of this media software. With skin editor, you can create skins as per your liking without knowing any coding or design knowledge. It's a WYSIWYG (What You See Is
