

What You Get) editor to create stunning skins quickly just by dragging and dropping. You can know more information from their official portal here. (<https://www.videolan.org/vlc/skineditor.html>)

Unique features of VLC Media Player

Converting Videos to other formats

You can also use VLC to convert your video files into any preferred format. From the top menu go to File > Convert/Stream to open a new Convert and Stream window. Here you can drop the file and choose the right format to convert that video file. Once the file and format are selected you can start the conversion process. Depending on the size of the file VLC will convert the file into a particular format.

Streaming media from your PC to another client

VLC provides comprehensive streaming solutions. It can act as
