

Developer friendly- not only from a user's point of view, BlueStacks is equally helpful for developers, especially those who wish to check the performance of applications regularly. They can easily monitor the status of the application with BlueStacks because of its 'developers test support' segment provided for the developers to complete the monitoring smoothly.

Excellent for Gamers- BlueStacks allows the gamer community to Live Stream all their favourite games to Twitch directly using its interface. No need for exporting the video and then streaming it separately, this saves streamers a lot of time.

Faster updates- the release of BlueStacks was an ultimate success which led to the releases of BlueStacks 2, BlueStacks 3 BlueStacks 4 more recently. This is one of the reasons why everyone enjoys the software as it regularly updates itself, and every single time it comes with additional features.

Compatibility with Android- The homepage of BlueStacks quite resembles the ones of Android devices because of its similar icons or menu. Whenever the user installs the software, icons identical to the mobile version will appear on the BlueStacks home screen.

Easy installation- there is nothing more convenient than easy upgrade installation for any software and BlueStacks provides two of them. In the first method, users can download the application directly from the Play Store, and in the second method, one has to download the APK file of the application and then it can be installed within a few steps.

Unique use case which highlights the versatility of the software

BlueStacks App Player is a versatile and feature-rich platform through which the user can emulate and play multiple games on their preferred system or screen. Soon after the release of BlueStacks in the year 2011, its updated versions were released frequently in the subsequent years. The most recent one is BlueStacks 4 64-Bit Beta which released in January 2019 having the latest flagship version after BlueStacks-4 in September 2018. BlueStacks 4 possesses 8X faster speed by involving resource management utilities to free the resources.

Better user interface is provided with its dock, and search function and its key mapping tool is AI-Powered to efficiently map the keys in corresponding games having customisation options. The latest version runs on Android 7.1.2 allowing the user to get the improvised
