Freelook feature

It is one of the latest highlights of BlueStacks which makes it easy for the user to watch over the edges. They can easily move the camera in a whole 360-degree angle and turn around or behind without holding any key. This latest feature is a part of an advanced keymap tool which allows the user to visualise the shortcuts. To use this, one has to select advanced settings accepting the menu and then find the option of 'FreeLook Header Edit UI'.

This feature is also available in the form of a shortcut which can be placed on the screen and it can be activated with the assigned key. All you have to do is-

- Drag and drop it to a place so that it cannot block your view
- Assign it to keyboard key turning the camera, or you can also use the mouse to get a fast spin

Performance- The newest version of Bluestacks gives six times faster speed as compared to the previous versions, and the best part is that it is lightweight and comparatively more powerful.

Media management- The media files can be accessed from the home screen of BlueStacks and one can move the desired files, photos or documents from the system.

BlueStacks points- the game players can easily earn BlueStacks points available on BlueStacks Store playing their favourite games on the system. You can do a variety of things from the scored points-

- Get them exchanged from any BlueStacks item available on the store
- Get easy access to the pro-gamer series
