

Handbrake

A cross-platform video transcoder
popular for its ability to handle just
about any video you throw at it

Handbrake is one of the most popular video transcoders, and has been around for seventeen years now. This is the go-to software to use any time you want to change the format, size or dimensions of a video. Usually, if the file size is reduced, there is also a quality loss. Handbrake uses a number of powerful third party libraries for video encoding including ffmpeg and x265. Handbrake has remained one of the fastest and most powerful transcoding applications since the very beginning, mostly because of how well it leverages hardware acceleration. Handbrake is free and open source, and additionally acts as the encoder for a number of third party video tools. These include HB Batch Encoder, which is a batch processing tool, VidCoder, geared towards working with
