

sharing between computer systems, and so on. Teamviewer software also refers to internet-based support and remote access service that can connect any system or server to any other system. The latest version of the software is TeamViewer 11 that can work efficiently on Windows, Linux, Mac, Mobile (Apple, Android, iPad) or any other operating system. TeamViewer 11 is accessible for free for noncommercial users.

Common functions of the software

Teamviewer is a software package that is capable of offering different features to the users enabling desktop support and remote access. It also provides interactive access to the user along with permitting system firewalls and antivirus protection. It can be used across various operating systems and its mobile version can be deployed on any USB stick or disc which makes it a perfect option even while travelling. The flexibility offered by the software makes it desirable in most situations. Some of the common features of the software are mentioned below.

File sharing- Demonstrations, training videos, platform presentations, and other such files can be easily shared across multiple systems using TeamViewer software. This also involves a status display so that the professionals or team members can easily find a medium to communicate with each other.

Software Liberty- TeamViewer software does not essentially require every machine to have this particular software installed. This feature is incredibly helpful for most of the customer support situations where the customer can run the entire program without any installation. This allowed technical professionals to remotely access the support.

Hardware access remotely- TeamViewer software has the feature through which users can pass commands to connected hardware systems. The feature of remote access to the cursor, printer, restarting system for shutting down and many more can be executed with the help of this software.

Communication modes- TeamViewer software has some efficient tools to support real-time communication between remote users and local users. Through the software, both the parties can exchange reports, information or insights in text, audio or video communication throughout the sessions.

Price- TeamViewer software is definitely not the cheapest option when considering the remote access tools and services and its license
