

features a 3-tier system. In the basic subscription models, the user gets limited features but if you are going client towards the support services then it might cost extra.

Benefits of TeamViewer software

TeamViewer was founded in the year 2005 and at present it has become one of the most popular and leading remote access systems available in the industry. This software enables organisations or individuals to access remote systems securely. TeamViewer software provides some significant benefits which are as follows-

- Teamviewer software is relatively easy for the users that have just begun with remote access and are new to its experience.
- The paid and free version of the software are equally fast and it has the ability to be utilised even without complete installation
- The price of this software is comparatively lesser than the other software in the same segment
- It is compatible with most of the operating systems or portable devices
- It offers absolute security providing a unique password for every session

Unique use case which highlights the versatility of the software

The latest version of Teamviewer has something new to offer. This version helps the user to access remote systems sharing any unique ID from remote desktop systems to other people. Until the users don't authorise the session, they will not get access to the documents. Moreover the latest versions of TeamViewer as TeamViewer 12, TeamViewer 13, TeamViewer 14 are all secured by the encryption of the AES session in order to add more security. Teamviewer software provides easy access to the machines running with the connected web browser. It is highly focused on the remote control of computer systems, collaboration, and presentation of its features and so on. The latest version of the software includes some of the unique features, which we have mentioned below.

Multi-platform compatibility- the latest version of the software is compatible with almost all of the operating systems including Mac OS, Linux, Windows, Android apps and so on. This also provides cloud-based management services to the users which enables them to use the software on various browsers without actually installing them.
