

IrfanView

A fast and versatile image viewer,
editor, organiser and converter like
no other

Long-time PC users will obviously know of IrfanView, an image viewer, organiser, and converter that was a life-saver for anyone who had a lot of photos. In this day and age, you could use it more for sorting through memes because it's way faster than all the other candidates. Named after its creator, Irfan Škiljan, the software was created with the aim of viewing as many different types of file formats possible while being fast. This includes proprietary image formats which would have otherwise required users to open the associated proprietary software. For example, RAW image file formats which are used by the different camera manufacturers often require a separate software or plugin to be installed before you can view them using the default image viewer in
