View is also adept at converting image files from one format to another. More so if you install the plugin pack as that adds the ability to manipulate a lot more formats than the vanilla installation.

Thumbnail Browser

Pressing T should open up the thumbnail browser interface that opens up a File Explorer-like interface with thumbnails in the right-hand panel and the folder tree-structure in the left hand panel. You can select a bunch of images in the Thumbnails Browser and initiate a batch operation, transfer via *FTP,* save file names as a text file, make a panorama or TIF or PDF or HTML or simply merge them all to create a single file. You can see that it's a very versatile organiser from this perspective.

Use the Thumbnail Browser feature to organise your images

Make a Slideshow

You can even select a bunch of images and make a self-contained slideshow or even a screensaver. If you've not used anything prior to Windows 7, then the concept of screensavers might appear to be alien but there was a time when screensavers used to be one of the most popular customisations that users made to their OS installations. Even now, the screensaver function is built into Windows 10 and you can access it via your Settings Panel. To create a Slideshow in IrfanView, open the Slideshow tool which is the second button on the toolbar. Or you can use the 'w' shortcut-key. Select all the images that you want to include in your slideshow and add them to the set
