

ID and client secret. Copy the client ID which is a string of numbers and keep that for later. Add a description for your bot if you want to. On the left-hand side, you'll see Settings panel with an option that reads “Bots”.

Click on it and click on the button that says “Add a bot”. Your bot entry should be added to your application now. You should see a button to Copy the token for your bot. Copy it and save it in a text file for later.

Now, install Node.js (<https://nodejs.org/en/>) on your PC. We opted for the LTS (Long Term Support) version which at the time of writing this article was version 10.16.0.

Add your bot to your server

If you haven't created a server on discord, then you might want to do that before proceeding with the following steps. Once you've created a server, you should proceed with adding your new bot to your server. To do that, take the following URL and switch out the phrase CLIENTID which the
