

string of numbers that you had saved from earlier. Then paste the URL into a browser tab and press enter to add the bot.

https://discordapp.com/oauth2/authorize?&client_id=CLIENTID&scope=bot&permissions=8

You should hear a chime that indicates a new joinee and the bot should be visible in the users panel on the right when you're viewing the server.

Bots can only be added using OAuth2 and you need to specify the permissions argument in order to give your bot certain abilities. In this case, we've given it `permissions="8"` which allows the bot to send messages. If you want your bot to manage channels, then you have to give it `permissions="10"` for that to happen. A complete list of permissions values can be found here - <https://discordapp.com/developers/docs/topics/permissions#permissions-bitwise-permission-flags>.

Getting your bot together

Create a folder, name it anything you want. Inside it, create a new text file called "auth.json" with the following line where the phrase `bot_token` is replaced with the token that you had obtained from the Discord bot creation page.

```
{
  "token": "bot_token"
}
```
