

```

•     logger.info(bot.username + ' - (' + bot.id + ')');
• });
• bot.on('message', function (user, userID, channelID, message, evt) {
•     // The bot will be evoked when you type !bobby
•     if (message.substring(0, 1) == '!') {
•         var args = message.substring(1).split(' ');
•         var cmd = args[0];
•         var listnum = Math.floor(Math.random() * 9);
•         var quotes = ['START THE DAMN JOUST BEFORE I PISS
MESELF!','HOLD YOUR TONGUE!','COME, BOW BEFORE YOUR KING!
BOW, YA SHITS!','GODS I WAS STRONG THEN','STOP THIS MAD-
NESS, IN THE NAME OF YOUR KING!','WINE! WINE! MOOOOOOOOAR
WINE!','YOU GOT FAT!','IS THAT HOW YOU SPEAK TO YOUR
KING?','WHO NAMED YOU? SOME HALFWIT WITH A STUTTER??'];
•         args = args.splice(1);
•         switch(cmd) {
•             // !bobby
•             case 'bobby':
•                 bot.sendMessage({
•                     to: channelID,
•                     message: quotes[listnum],
•                 });
•                 break;
•             }
•         }
•     }
• });

```

The logic here is fairly straightforward. We are evoking the bot whenever anyone types !bobby in the chat. The bot will always check if the text string starts with an exclamation mark and then if it is followed by the word bobby. When this is found to be the case, a random quote will be picked from the quote bank and that will be sent into the chat channel. We are using an array to hold the quotes which for the sake of this example is currently holding nine quotes. This is why our random number generator is set to pick an integer between values 0-to-8 which will be used to select the quote from the array.

We're going to improve the code later on and make it so that just typing the word bobby at any point in the sentence will call the bot. This can easily
