README

Most of the modern software packages documentation is saved in the local directories at /usr/share/doc in the text format. Some of these files are also saved in HTML format with access via web browser and can also be viewed using less. These files may include the following information.

- Configuration requirement & instructions
- Installation requirement & instructions
- Operating instructions (Step by step guidance)
- File manifestation (list of files included)
- Contact information (distributor or programmer)
- Known bugs and their solution
- Troubleshooting Information
- Credits and acknowledgements
- Changelog
- news section
- Copyright and licensing information

Conclusion

Man pages are a comprehensive reference guide to the bash shell in Linux. They provide useful information about the command, their option, and respective usage to get specific results. Several helpful commands are there that help us to read bash man pages effectively.
