A brief look at the longer format

As we have seen before, when `-l` is added to `ls`, the content of the chosen directory is printed in a longer format with all the details mentioned in the same. Let's look at the following example to see how to decipher that information.

```

Field -> Meaning

- `-rw-r--r--`

This is the field for the access rights for a directory or a file. A `-` indicates a regular file while a `d` indicates a directory. The first three characters define the rights for the admin, the next three for the group and the last three for all other users.

- `1`

File number of the hard links.

- `root`

The username of the owner of the file.

- `root`

The name of the particular group that owns the file.
