

copy the content that is missing or modified, there is no need to overwrite the existing content.

- `-v, --verbose`

You can choose to display information messages as the content is being copied.

3. mv

The `mv` command is used to move and rename any file depending on how you use it, and in any case, the file doesn't have its original name once the `mv` command is used.

The syntax is `mv` is very similar to `cp` and can be used like:

- `mv item1 item2`

This is to move or rename directory `item1` to `item2`

- `mv item... directory`

This is to move or rename more than one directories to another

Options -> Meaning

- `-I, --interactive`

Before operating, confirm from the user; if this option is not selected, the system will simply overwrite the existing content.

- `-u, --update`

This means when you copy some content from one place to another, only copy the content that is missing or modified, there is no need to overwrite the existing content.

- `-v, --verbose`

You can choose to display information messages as the content is being copied.

4. rm

The `rm` command is used to remove files and directories.

- `rm item...`

Here, the item is any file/s or directory/ies

Options

Options

Meaning

- `-I, --interactive`

Before operating, confirm from the user, if this option is not selected, the system will simply delete the files without asking.

- `-v, --verbose`

You can choose to display information messages as the content is being copied.

- `-r, --recursive`

This command recursively deletes directories. This means that the directory being deleted has any subdirectories or subfiles; they too are deleted with them.
