

text, you should enter “Return” and move to the text line or set up a “wrap margin” and do the same. You can enter Insert Mode by other means too, but you can exit it by only using the <ESC> button.

If you doubt the mode you are in, then you can press the <ESC> button and check it by pressing a key. If the key prints itself, then you are in the Insert Mode or else you are in the Command Mode.

Moving within a file in the Command Mode

Since the command mode accepts command when you hit an alphabetical key, you can use it to move within a file without using the usual cursor keys.

“k” - For moving the cursor in the upward direction

“j” - For moving the cursor in the downward direction

“h” - For moving the cursor in the left direction

“l” - For moving the cursor in the right direction

To use these keys, you have to be in command mode.

Closing and saving files in the Vi Text Editor

Closing and saving files in the Text Editor will happen from Command mode. For doing these, there are some codes for closing and saving a file:

:wq! - For saving the file and quitting Vi Text Editor.

:w! - For saving the file but keeping it open.

:q! - For quitting the file without saving it, or the changes that you made to an existing file. This command can also be called control for forced closure.

Deleting Text in Vi Text Editor

In Vi, you have to use specific commands to remove parts of the text. These commands will help you to eliminate the character, a word or a specific line. Since the editor has to be in the Command Mode while deleting parts of the text on the editor, you have to enter the Insert mode again to have subsequent text insertions into the text file.

Deleting One Character from the Text

To remove an individual character from your text file, you have to place the cursor above the particular character to be deleted and type “x”. This command will delete the character and also the space occupied by that particular character. This command shall also help you to eliminate blank spaces wherever required.

This command, with “x”, deletes the characters or the spaces on the right hand side of the cursor, where it is placed.
