Storage and Networking

Storage and networking functionalities get a prolific boost with Linux

Linux brings a gamut of storage and networking features which boosts the respective functionalities manifold. Especially, if you are seeking some enterprise solution for seamless data storage or networking activities for your organisation, Linux has it all. Speaking about storage architecture, Linux covers all the three models like-

- a. Direct Attached Storage (DAS)
- b. Storage Area Network (SAN)
- c. Network Attached Storage (NAS)

The above three models include all possible storage architectures used throughout. The most important aspect of Linux is its Open feature which makes development of new storage technology possible. Another feature of
