

```
sudo mount -o loop /path/to/my-iso-image.iso /mnt/iso
```

III. Run the following command to verify the .ISO file mounting process-

```
mount or df -H or ls -l /mnt/iso/
```

IV. Unmount the .ISO file using `sudo umount /mnt/iso/`

Procedure to mount .ISO file/images in Linux:

Use the `su` command to login as a root user. Note that without logging in as a root user, you will not be able to mount .ISO file/images in Linux.

```
$ su -
```

Use the `sudo -i` command to run mount commands as root user

```
$ sudo -i
```

Use `mkdir` command to create a directory or mount point for the .ISO file/

```
image # mkdir -p /mnt/disk
```

Use `mount` command to mount .ISO file called `disk1.iso`

```
# mount -o loop disk1.iso /mnt/disk OR
```

```
# mount -o loop /path/to/disk1.iso /mnt/disk
```

Verify it with the `df` command or `mount` command:

```
# df -H
```

```
# mount
```

```
# ls -l /mnt/disk/
```

Change directory to list files stored inside an ISO image:

```
# cd /mnt/disk/
```

```
# ls -l
```

To copy files using the `cp` command:

```
$ cp file1 file2 /home/<user>/Downloads
```

Unmount .ISO file/image

The following command is used to unmount the .ISO file/image on Linux:

```
$ sudo umount /mnt/disk/ OR
```

```
$ sudo umount /path/to/disk1.iso
```

To verify the unmount procedure, following series of commands are used

```
$ df -H
```

```
$ mount
```

```
$ ls -l /mnt/disk/
```

Networking

Linux Networking is one of the most preferred modes of networking systems prevalent in the IT industry as far as corporate and enterprise editions of communication is concerned.
