

Getting Started With Ubuntu

Let's learn more about this free, open-source software operating system

Introduction

Created by Linus Torvalds in 1991, Linux became one of the first operating system kernels to be used by the masses. The name was designed quite interestingly, where Linux meant 'Linux Is Not Unix'. Linus Torvalds created Linux intending to keep it free. Hence, this operating system kernel went on to become an open-source program, unlike Unix. The entire source code is available for people to see, download, and modify; and as a result, a community was created. Today, Linux is driven primarily by a strong group of programmers who continuously strive to make the interface even better. There are many distributions of operating systems that were created by students and other programmers that
