

to increase the speed of the ship. Adjusting Angular Friction, will similarly change the speed at which the ship rotates on command. Play around with these values a bit,

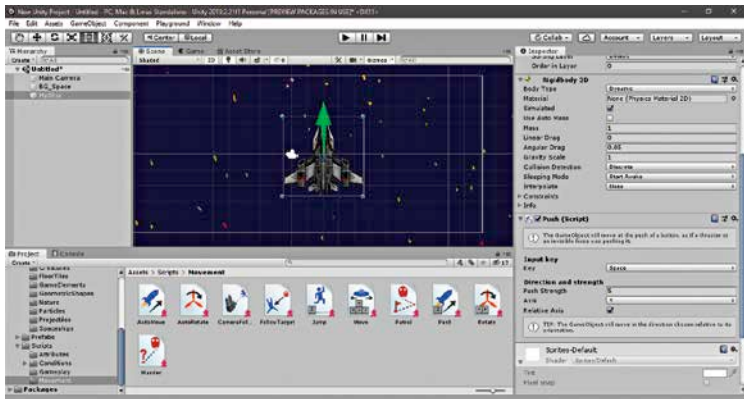

to get an understanding of what is going on in the playground. Once you are familiar with the basic concepts, we can go ahead to making a simple game on Unity Playground.

The movement scripts in Unity Playground

Making your first game

Now we will be creating a game, using the scripts available in Unity Playground. Go to the Assets directory, right click on a blank space, and select **Create > Folder**. Give a name to your folder. Now, right click within this new folder, and go to **Create > Scene**. Provide a name for your Scene as well. Next, go to **Image > Backgrounds**, and select BG_Space. Drag and drop this asset into the Hierarchy panel on the top left corner. The image that you have just dragged in, has now been converted to a Game Object, as shown by the grey cube in the Hierarchy panel. Every time you drag anything from the Assets folder into the Hierarchy panel, they are converted into Game Objects, on which scripts and other components can be added. You will see that there are already two components on the Inspector panel to the

Adding script components in Unity
