

A ship variant with two laser blasters... located at the engines

panel, to the Prefab folder. Note that the projectile will be converted to a prefab no matter which folder in the Project panel it is dragged into, we are using the Prefab folder to keep things organised. In large and complicated projects, maintaining a proper tree structure for all the assets simplifies the game design process considerably. After the projectile has been converted into a prefab, it can be deleted from the scene, as any changes in the components or the values of attributes can be directly changed on the prefab. We also need the spaceship to generate the projectiles on button presses, and do not need one in the scene when the game begins.

In the Hierarchy panel, right click on an empty space and click on Create Empty. This creates a blank GameObject. Change the name of the GameOb-
