

Shoot em up!

Creating two games focused on blowing things up with lasers in Unity

In this chapter, we will be making two games that are focused on blowing things up with lasers, because who doesn't like to do that? The first one is a two player dog fighting game, which will require both the players to use the same keyboard. The second one is a clone of the classic Asteroids title. Let's just get right to it.

A dogfight game

Now, we will be making a dogfight game for two players. To do this, we will need to make some changes to the project, so go to `File > Save As` and type in a suitable name for a new dogfight scene. Scenes are actually used to make levels in a game, but in a simple game such as this, a single scene is the entire game. Then, go ahead and delete all the asteroids from the scene. Make sure you have converted them into prefabs by dragging them to the
