

```

• using UnityEngine;
• using UnityEngine.UI;
•
• public class timerscript : MonoBehaviour {
• public float timestart = 0;
• public Text textbox;
•
• void Start()
• {
•     textbox.text = timestart.ToString();
• }
•
• void Update()
• {
•     timestart += Time.deltaTime;
•     textbox.text = Mathf.Round(timestart).ToString();
• }
• }

```

This is a modified version of a script from presstart.vip, which has a whole bunch of really cool and easy to follow tutorials on Unity. Add the timerscript as a component to the UI, then drag the cutimer GameObject to the Textbox attribute in the timerscript component of the UserInterface_racer Prefab. Run the game, and there will be a nice countup timer at the top of the screen.

Next, we will allow the spaceship to acquire points by crossing waypoints. In the UserInterface_Racer, under the UI Script component, change the Score

The finished rescue mission level.
