

Painting a level using the Tilemap.

sary menu options for the Game View. Change this to the aspect ratio that you want to play the game on. For most modern computers, it should be 16:9. This will resize the image so that you can see how much of the level is shown in each scene. The default keyboard controls are WASD tools for movement, Space for jumping, O to shoot with your gun and K to swipe with your staff. Exit the play mode. The rest of the tools described below can also be found in the regular version of Unity, but just need to be set up, such as adding tiles to the Tile Palette for painting your scene, which we will be doing in the next step.

Go to **Window > 2D > Tile Palette**. By default, the **TileSetRock-WaterBlockers** will be selected. Click on the drop down menu and select **TileSetGameKit**. There are two options here, one is a rocky surrounding, and the other is one with grass. Just keep one of these two selected, then

What the finished level looks like in our example.
