

Glad you game

If you have absolutely no interest in making a game, then this Fast Track is written for you. If you have an interest, but no idea on how to go about making a game, then this Fast Track is written especially for you. By the end of following the steps outlined below, you will be surprised at how easy it is to make a game today, and wondering why you did not get into this sooner.

You do not need to have a professional interest in the business of game development to learn to make your own games. While Unity is a good game engine, it is also a great medium for self expression. Unity actually allows you to create games without using any code whatsoever. This means that practically anyone can come up with a way to use the Unity engine for their own ends, from educators showcasing physics, to professionals or students making kickass, mind blowing interactive presentations, or artists looking for a new type of canvas. There can be many creative reasons for making a game. No matter what skillsets you have, making your own game can be a therapeutic and uplifting experience. If you have an urge to unleash your imagination, or have a concept for a game in mind, or played a game and thought of ways to improve it, Unity is the way to go.

This Fast Track explores the most essential aspect of what makes games as well as the process of making games fun, and no it is not testing. It is about tweaking the core gameplay, fine tuning the various aspects of the game, the physics of the world, how precisely a player character can be controlled, how rapidly a gun can fire, how fast a vehicle is allowed to accelerate around
