

or gun, as well as a door that can be opened. Go to **Prefabs > Interactables** and drag the Destructible wall into one side of the passageway that you created in the map. It does not have to occupy the entire gap vertically, but you can scale it to do so if you want. Now try playing the game and using the staff to break down the wall. It takes five strikes to do so, after which there is a nice animation of the wall breaking and falling apart. Now, this may be way too many strikes to break the wall, so we will be reducing the number of necessary strikes. If you click on the Destructible Wall Prefab in the Hierarchy, you will see that it does not have too many components. Expand it, and click on the daughter GameObjects to find the components that you need to modify the attributes of. Here, it's **DestructibleWall_Whole**, find the **Damageable Script** and change the health from 5 to 3 or 2.

Now, at the other end of the passageway, a door can be created. Drag one of the doors from the Interactables folder into the scene to the appropriate position. We will now be adding a pressure pad, that opens the door when Ellen steps on it. Under **2DGameKit > Prefabs > Interactables**, there is a Prefab called **PressurePad**. Drag it into the scene, close to the door. One of the helpful things to do at this stage is to move Ellen close to the pressure pad in the scene view before running the game. This prevents you from having to play the whole level till you get to the point of testing a new gameplay element that you just added to the game. To do this, you will need to select and move two Prefabs simultaneously. These are the Ellen and the Cameras Prefabs. You can select both of them simultaneously by keeping the Ctrl button pressed while clicking on them. Test out the game. When

How to correctly reposition Ellen within the scele.
