

Chomper's damage settings. Chomper moves, while Spitter stays rooted.

As soon as you drag Spitter into the scene, you will see a green gizmo. This gizmo indicates the field of view of Spitter, the area in which he can detect Ellen and start attacking. The Enemy Behavior Component is used for this, which is the same for both Spitter and Chomper. While Spitter does not use melee attack attributes, Chomper does not use range attack attributes. You can use the sliders to adjust the View Direction, View FOV, and click-drag or change the value of the attribute to change the View Distance. These settings together have to be used so that Spitter detects Ellen at the edge of the ledge and starts attacking. The idea is to make sure that Spitter cannot see behind him, and can clearly see upwards from where Ellen will approach.

At this point, if you play the game, Spitter will detect Ellen at the ledge and start attacking her. However, Ellen cannot use the staff or the gun to attack back, and will need to drop off the ledge to attack. We are now going to give Ellen another way of killing Spitter. To do this, we will use the PushableBox from **Prefabs > Interactables**, and place it on the ledge. Ellen can now push this box over the ledge. If you play the game however, the box simply lands on top of Spitter, and stays there. Spitter can continue to attack Ellen. To fix this, we need to make the box damage Spitter. If you check out Spitter's Components, you will notice that he has a Damageable Component too, the
