

Collectible objects

Adding collectible objects, an inventory system, a teleporter, and more

There are some objects that the player can pick up or gather. These may be permanent, such as a weapon that is available for the rest of the game, or temporary, such as a potion that replenishes the health of a hurt player. There may also be temporary collectables, such as keys that open particular doors, or activate portals. We will go about adding some of these to the game in this chapter.

It is very likely that Spitter managed to at least attack you once with his attack, and to compensate for this lost health, we will be adding a health pickup. It is a destructible box that can be found in `Prefabs > Interactables > HealthPickup`. Just drag and drop it into scene after Spitter.
