

Adding as much health as Ellen can possibly gain in every Health Box, ensures that all her health is restored every time she opens up a box.

change the Order in Layer Attribute to 5. Now go to **Prefabs > Enemies**, and drag in Spitter behind the bush. To make things consistent, use the same values that you used for the other Spitter. To make this more devious, make sure that Spitter's blind spot is the direction from which Ellen approaches. This means that Spitter will only start attacking Ellen after she walks past him, and suddenly too, at close range. This approach will not work with the other enemy, Chomper, as Chomper patrols the area and will not remain hidden in one place like Spitter. Let us add another HealthPickup, but before the destructible column. As Ellen has just picked up a HealthPickup after the encounter with Spitter, and there are no other enemies on the way, it is very likely that the second HealthPickup will not be triggered. Ellen will have to remember that there is an unused HealthPickup earlier in the game, and go back to it, in case she is damaged by the second Spitter.

The inventory system

Now, let us drag Ellen and the Camera back to the start of the map. The idea is that Ellen will pick up a key, and then use it towards the end of the map. The 2D Kit has an inventory system, which is implemented mainly through the Inventory Controller Component on Ellen. If you go to this Component, you will see that by default, Ellen has an inventory capacity of 5, and already has the Staff and the Gun. She can also collect three keys. Go to **Prefabs > Interactables**, then drag and drop the Key into the Scene. At this point, the key simply floats in the air, and Ellen just runs past it. Select the Key Prefab in the Hierarchy panel, and click on Add Component in the Inspector, and
