

means that the controls for the player will be changed across all the Scenes within the project.

The Ellen Prefab is located in the root of the Prefab folder. Select the GameObject, and go to the Player Input Component. Here, you can remap the keyboard, and actually even find out all control options available in the first place.

We have covered only some of the Components and Attributes in this Fast Track. To learn more about all the Components available at your disposal, as well as how to use the various Attributes, check out the .pdf files in the Documentation folder of the Project file. There are still many ways that you can use what you have learnt so far, to create many levels of your own, and chain them up into a complete 2D platformer.
