

A side scrolling space shooter

Creating and tweaking your very own side scrolling space shooter game

For the next project, we will be making a side scrolling bullet hell space shooter. We will be using Unity Playground for some of the scripts, but using our own as well to expand the capabilities, and do exactly what we need to do. Don't worry though, these scripts are not too complicated, and we will be explaining what each line is accomplishing.

An over the top background

Create a new project through Unity Playground, and name it SpaceShooter, or whatever else you want to call your game.
