

intersect, so that if they appear on screen together, they will not collide with each other. No need to tag the waves and the Mother gun ship.

You can also periodically send in health packs for the Player to pickup and regenerate health. Spawn slowly moving objects across the screen, with the components for timed self destruction. Add a modify health attribute, and give a positive value to it, say +5. Make sure to check it as a trigger in the 2D Collider used, and to mark the Destroy When Activated checkbox.

Now, just add the UserInterface Prefab from the Project folder, change Number of Players to Two Players, and Game Type to Life. Your game is all ready! To create a playable file that you can use to instantly start up the game without having to open Unity, just go to File and select Build and Run.
